

A self-made tutorial for GitHub Flavored Markdown (GFM), and its source codes

Takao Inoué

AI Nutrition Project
National Institutes of Biomedical Innovation,
Health and Nutrition, Osaka, Japan*

2023-5-19

Abstract

This is a short self-explanatory tutorial for GFM. GitHub provides users with a syntax for formatting text called GitHub Flavored Markdown (GFM). Everyone who uses GitHub needs simple knowledges of GFM. GitHub is a good platform to exchange program sources. The filename extension for GFM is md, used as (filename).md. The content of the tutorial is the same as that of my file "A-self-made-tutorial-for-GitHub-Flavored-Markdown-GFM.md" in my GitHub site¹, which was written in 2016 as a service for the users of GFM. The file was revised in 2023. This short tutotial gives a set of concrete descriptions and their sources written by using GFM. Although there is little explanation and one will directly understand the contents from the sources with ease. And one will be able to write sentences to be used in GitHub soon, if one minics the sources. We shall give README.md and all the source codes of the tutorial file in the Appendices.

2.1 The title and preface

A-self-made-tutorial-for-GitHub-Flavored-Markdown-GFM

A self-made tutorial for GitHub Flavored Markdown (GFM)

A self-made tutorial for GitHub Flavored Markdown (GFM)

Takao Inoue (May 19, 2023)

GitHub provides users with a syntax for formatting text called GitHub Flavored Markdown (GFM). The filename extension for GFM is md, used as (filename).md. This file is "A-self-made-tutorial-for-GitHub-Flavored-Markdown-GFM.md". This short tutorial gives a set of concrete descriptions and their sources written by using GFM. There is little explanation and one will directly understand the contents from the sources. This was first presented Aug 4, 2016 and revised May 19 2023. The revision was added some basic materials like triple backticks, footnotes, etc.

```
(The source of the above)
# A-self-made-tutorial-for-GitHub-Flavored-Markdown-GFM
A self-made tutorial for GitHub Flavored Markdown (GFM)

## A self-made tutorial for GitHub Flavored Markdown (GFM)

Takao Inoue (May 19, 2023)

    GitHub provides users with a syntax for formatting text called GitHub Flavored Markdown (GFM).
    The filename extension for GFM is md, used as (filename).md.
    This file is "A-self-made-tutorial-for-GitHub-Flavored-Markdown-GFM.md".
    This short tutorial gives a set of concrete descriptions and their sources written by using GFM.
    There is little explanation and one will directly understand the contents from the sources.
    This was first presented Aug 4, 2016 and revised May 19 2023. The revision was added some basic
    materials like triple backticks, footnotes, etc.
```

Figure 1: The title and preface

A self-made tutorial for GitHub Flavored Markdown (GFM)

## A self-made tutorial for GitHub Flavored Markdown (GFM)

Takao Inoue (May 19, 2023)

    GitHub provides users with a syntax for formatting text called
    GitHub Flavored Markdown (GFM).
    The filename extension for GFM is md, used as (filename).md.
    This file is "A-self-made-tutorial-for-GitHub-Flavored-Markdown-GFM.md".
```

This short tutorial gives a set of concrete descriptions and their sources written by using GFM.

There is little explanation and one will directly understand the contents from the sources.

This was first presented Aug 4, 2016 and revised May 19 2023. The revision was added some basic materials like triple backticks, footnotes, etc.

2.2 The most basic things

Please note that three ‘ appeared in §2.2, that is,

```
'''
```

means triple backticks in all parts of this paper !

Let us begin with the most basic things.

The most basic thing 1: quoting codes and texts use triple backticks `'''`.

The most basic thing 2: a new paragraph can be created by leaving a blank line between lines of text.

```
'''
The most basic thing 1: quoting codes and texts use triple backticks `'''`.

The most basic thing 2: a new paragraph can be created by leaving a blank line between lines of text.

'''
```

Figure 2: The most basic things

(The source of the above)

```
## Let us begin with the most basic things.
```

```
#### The most basic thing 1: quoting codes and texts use
triple backticks ' ' ' ' .
```

```
#### The most basic thing 2: a new paragraph can be created by
leaving a blank line between lines of text.
```

```
'''
'''
The most basic thing 1: quoting codes and texts use triple
backticks ' ''' '.

The most basic thing 2: a new paragraph can be created by leaving a
blank line between lines of text.

'''
'''

The above gives the following:
```

```
The most basic thing 1: quoting codes and texts use triple backticks ` ``` `.
```

Figure 3: The result of quoting

2.3 Headings and quoting texts

Heading

small heading

Quoting text

Proverb of Latin:

fortuna favet fortibus.

Nice words:

"Not all of us can do great things. But we can do small things with great love." — Mother Teresa

Figure 4: Headings and quoting texts

```
(The source of the above)
### Heading
#### small heading
## Quoting text
Proverb of Latin:
>fortuna favet fortibus.
```

Nice words:

```
>'Not all of us can do great things. But we can do small things
with great love.'
>-Mother Teresa
```

2.4 Styling texts

Styling text

This text is italic. **This text is bold.**

This text is bold and *partly italic.*

~~This is an enigma.~~

Figure 5: Styling texts

```
(The source of the above)
## Styling text
*This text is italic.*
**This text is bold.**

**This text is bold and partly italic.**

~~This is an enigma.~~
```

2.5 Unordered lists and ordered lists

Unordered lists

- Good morning : bread and coffee
- Good afternoon : rice, pork, and vegetables
- Good evening : rice, chicken curry and ice cream

Programming

- C++
- Python
- Qt

Ordered lists

1. STL
2. C++/CLI
3. clang

Figure 6: Unordered lists and ordered lists

(The source of the above)

```
## Unordered lists
```

```
* Good morning : bread and coffee
```

```
* Good afternoon : rice, pork, and vegetables
```

```
* Good evening : rice, chicken curry and ice cream
```

```
### Programming
```

```
- C++
```

```
- Python
```

```
- Qt
```

```
## Ordered lists
```

```
1. STL
```

```
2. C++/CLI
```

```
3. clang
```

2.6 Hierarchy lists (Nested lists) Part 1 (Wrong indentations)

Hierarchy lists (Nested lists) Part 1 (Wrong indentations)

Mathematical logic

1. Proof theory
2. Cut elimination theorem
3. Consistency
4. Model theory
5. Classic theory 1. Quantifier elimination 2. Compactness theorem
6. Stability theory
7. Recursion theory
8. Recursion theorem
9. Arithmetical hierarchy
10. Set theory
11. Forcing
12. Large cardinals
13. Computer science and logic
14. Mizar
15. Category theory

Figure 7: Hierarchy lists (Nested lists) Part 1, wrong

(The source of the above)

```
# Hierarchy lists (Nested lists) Part 1

1. Proof theory
  1. Cut elimination theorem
  2. Consistency
2. Model theory
  1. Classic theory
    1. Quantifier elimination
    2. Compactness theorem
  2. Stability theory
```

- 3. Recursion theory
 - 1. Recursion theorem
 - 2. Arithmetical hierarchy
- 4. Set theory
 - 1. Forcing
 - 2. Large cardinals
- 5. Computer science and logic
 - 1. Mizar
 - 2. Category theory

2.7 Hierarchy lists (Nested lists) Part 2 (Correct indentations)

Hierarchy lists (Nested lists) Part 2 (Correct indentations)

Mathematical logic

- 1. Proof theory
 - i. Cut elimination theorem
 - ii. Consistency
- 2. Model theory
 - i. Classic theory
 - a. Quantifier elimination
 - b. Compactness theorem
 - ii. Stability theory
- 3. Recursion theory
 - i. Recursion theorem
 - ii. Arithmetical hierarchy
- 4. Set theory
 - i. Forcing
 - ii. Large cardinals
- 5. Computer science and logic
 - i. Mizar
 - ii. Category theory

Figure 8: Hierarchy lists (Nested lists) Part 2, correct

(The source of the above)

Hierarchy lists (Nested lists) Part 2

Mathematical logic

1. Proof theory
 1. Cut elimination theorem
 2. Consistency
2. Model theory
 1. Classic theory
 1. Quantifier elimination
 2. Compactness theorem
 2. Stability theory
3. Recursion theory
 1. Recursion theorem
 2. Arithmetical hierarchy
4. Set theory
 1. Forcing
 2. Large cardinals
5. Computer science and logic
 1. Mizar
 2. Category theory

2.8 Backslash escapes

Backslash escapes

`*literal asterisks*`

`*****` (ten asterisks)

Markdown(GFM) provides backslash escapes for the following characters:

- `\` backslash
- ``` backtick
- `*` asterisk
- `_` underscore
- `{}` curly braces
- `[]` square brackets
- `()` parentheses
- `#` hash mark
- `+` plus sign
- `-` minus sign (hyphen)
- `.` dot
- `!` exclamation mark

Figure 9: Backslash escapes

(The source of the above)

`## Backslash escapes`

`*literal asterisks*`

`*********` (ten asterisks)

Markdown(GFM) provides backslash escapes for the following characters:

- * \\ backslash
- * \' backtick
- * * asterisk
- * _ underscore
- * \{\} curly braces
- * \[\] square brackets
- * \(\) parentheses
- * \# hash mark
- * \+ plus sign
- * \- minus sign (hyphen)
- * \. dot
- * \! exclamation mark

2.9 Quoting code, a la carte

Quoting code, a la carte

GitHub's URL is `https://github.com/github`.

Boldface of Boldface is written as `**Boldface**`.

```
#include <stdio>

int main() {

    printf("\n Hello GitHub!\n");

    return 0;
}
```

Figure 10: Quoting code, a la carte

```

(The source of the above)
## Quoting code, a la carte

GitHub's URL is 'https://github.com/github'.

Boldface of Boldface is written as 'Boldface'.

' ' ' (Delete two spaces between ' and ' . )
#include <stdio>

int main() {

    printf("\n Hello GitHub!\n");

    return 0;
}
' ' ' (Delete two spaces between ' and ' . )

```

2.10 Link

Link

The hyperlink to GitHub (<https://github.com/github>) with `Let's begin GitHub!` is as follows:

[Let's begin GitHub!](https://github.com/github)

Figure 11: Link

```

(The source of the above)
## Link

The hyperlink to GitHub (https://github.com/github) with
'Let's begin GitHub!' is as follows:

[Let's begin GitHub!](https://github.com/github)

```

2.11 Using emoji

Using emoji

- 🌙 (crescent_moon)
- 🌿 (herb)
- 🌸 (cherry_blossom)

For a full list of available emoji and codes, check out emoji-cheat-sheet.com.

So many emojis there! Wow! 🎉

Figure 12: Using emoji

(The source of the above)

```
## Using emoji
```

```
* :crescent_moon: (crescent_moon)
* :herb: (herb)
* :cherry_blossom: (cherry_blossom)
```

For a full list of available emoji and codes, check out
[emoji-cheat-sheet.com] ([http://www.webpagefx.com/
tools/emoji-cheat-sheet/](http://www.webpagefx.com/tools/emoji-cheat-sheet/)).

So many emojis there! Wow! :tada:

2.12 Task lists

Task lists

- ☒ Let's take a coffee break.
- ☐ Let's go for a walk.
- ☐ Let's learn more GitHub.

Figure 13: Task lists

```
(The source of the above)
## Task lists

- [x] Let's take a coffee break.
- [ ] Let's go for a walk.
- [ ] Let's learn more GitHub.
```

2.13 Mentioning users and teams

Mentioning users and teams

When you mention me, use @Takao-Inoue.

Figure 14: Mentioning users and teams

```
(The source of the above)
## Mentioning users and teams

When you mention me, use @Takao-Inoue.
```

2.14 Underscores are ignored in multiple occurrences

Underscores are ignored in multiple occurrences

MUSSER-1997-Software-_Practice_and_Experience.pdf

(Musser's imporant paper: David R. Musser, Introspective Sorting and Selection Algorithms, Software-Practice and Experience, Vol. 27(8), 1997, pp. 983–993.) Introspective sorts, that is, Heapsorts after quicksorts are faster than quicksorts only.

Figure 15: Underscores are ignored in multiple occurrences

(The source of the above)

Underscores are ignored in multiple occrrences

MUSSER-1997-Software-_Practice_and_Experience.pdf

(Musser's imporant paper: David R. Musser, Introspective Sorting and Selection Algorithms, Software-Practice and Experience, Vol. 27(8), 1997, pp. 983{993.) Introspective sorts, that is, Heapsorts after quicksorts are faster than quicksorts only.

2.15 Syntax highlighting

Syntax highlighting

```
#include <iostream>
#include <string>
#include <utility>

using namespace std;

int main(int argc, char** argv) {

    pair<string, string> myPair_year("2016", "8");
    pair<string, string> myPair_greetings("Hello", "GitHub!");
    pair<int, string> myPair_great(2016, "Congratulations!");

    cout << "*****" << endl;

    cout << "Year: " + myPair_year.first + ", " + "Month: " + myPair_year.second << endl;
    cout << myPair_greetings.first + " " + myPair_greetings.second << endl;

    cout << "*****" << endl;

    cout << myPair_great.first << " year! " << myPair_great.second << endl;

    return 0;
}

result:

*****
Year: 2016, Month: 8
Hello GitHub!
*****
2016 year! Congratulations!
```

Figure 16: Syntax highlighting

For this syntax highlighting, linguist is made use of.

(The source of the above)

Syntax highlighting

```

‘ ‘ ‘C++ (Delete two spaces between ‘ and ‘ . )
#include <iostream>
#include <string>
#include <utility>

using namespace std;

int main(int argc, char** argv) {

    pair<string, string> myPair_year("2016", "8");
    pair<string, string> myPair_greetings("Hello", "GitHub!");
    pair<int, string> myPair_great(2016, "Congratulations!");

    cout << "*****" << endl;

    cout << "Year: " + myPair_year.first + ", " + "Month: " +
myPair_year.second << endl;
    cout << myPair_greetings.first + " " + myPair_greetings.second
<< endl;

    cout << "*****" << endl;

    cout << myPair_great.first << " year! " << myPair_great.second
<< endl;

    return 0;
}

```

result:

```

*****
Year: 2016, Month: 8
Hello GitHub!
*****
2016 year! Congratulations!
‘ ‘ ‘ (Delete two spaces between ‘ and ‘ . )

```

For this syntax highlighting, [linguist](https://github.com/github/linguist) is made use of.

2.16 Tables: Example 1 – Example 4

Tables

Examples 1-3 are the same tables whose sources are different.

(Each ninja (group) below was finally hired by the corresponding shogun.)

Example 1

Ninja	Shogun
Iga	Tokugawa
Kouga	Oda
Fuuma	None

Example 2

Ninja	Shogun
Iga	Tokugawa
Kouga	Oda
Fuuma	None

Iga	_Tokugawa_
Kouga	*Oda*
~~Fuuma~~	**~~None~~**

2.17 Tables: Example 5 (text-align) and Example 6

Example 5 (text-align)

Left-Aligned	Center Aligned	Right Aligned
Bach	Bach	Bach
Mozart	Mozart	Mozart
Brahms	Brahms	Brahms
Chopin	Chopin	Chopin

Figure 19: Table: Example 5 (text-align)

Example 6

Fruits	Name	Taste	Comments
	Apple		Apples produced in Nagano in Japan are one of the best.
	Green apple		
	Tangerine		
	Lemmon	Sour!	
	Cherries		Cute!
	Grapes		
	Watermelon		I like it! But don't eat too much.
	Strawberry		Recent Japanese strawberry varieties have good taste and appearance.
	Peach		
	Melon	Sweet	
	Banana		I have a custom to have one banana in the morning.
	Pear	Special nice taste	
	Pinapple		It is very good as a topping for hamburgers, I think.

Figure 20: Table: Example 6

(The source of the above)

Example 5 (text-align)

```
| Left-Aligned | Center Aligned | Right Aligned |
| :-----: | :-----: | -----: |
| Bach | Bach | Bach |
| Mozart | Mozart | Mozart |
| Brahms | Brahms | Brahms |
| Chopin | Chopin | Chopin |
```

Example 6

```
| Fruits | Name | Taste | Comments |
| :-----: | :-----: | :-----: |
```

```

:----- |
|:apple: | Apple | | Apples produced in Nagano in Japan are one of
the best.
|:green_apple: | Green apple |
|:tangerine: | Tangerine | | |
